## SUMMARY OF INTERESTS

I study values, learning, and behavior, and their interactions with sustainability, at multiple scales. I have three foci: (1) Values and the intangible elements of relationships between humans and ecosystems; this research primarily addresses cultural ecosystem services and relational values (e.g., the roles ecosystems and biodiversity play in identity, psychological well-being, social cohesion, and spiritual fulfillment). (2) How people learn about the environment and why people do or do not behave “pro-environmentally”; this work addresses individual and collective actions, and interactions between scales. (3) The issues of equity and justice that infuse the first two foci.

I am an inter- and transdisciplinary scholar. I draw on and contribute to theories from multiple disciplines and fields, including philosophy, ecology, anthropology, sociology, psychology, geography, and religious studies; I also work closely with a variety of partners outside of academia, at scales from local to international.
